

Luca Allievi studied chemistry at the University of Milan and graduated in 2013. In 2017, he obtained his PhD in organic chemistry from the Université Paris Descartes with a focus on total synthesis. He then decided to pursue a career in industry and gained experience as a medicinal chemist at Eli Lilly in Madrid and at Evotec SA in Toulouse. In 2020, he moved into bulk process chemistry and worked as R&D lead in agrochemicals for SEDQ. He is currently working as an R&D chemist and project manager at Valsynthese SA. His main interest is synthetic chemistry, with a strong focus on applying new techniques to industrial processes and developing safer, more efficient methods for large-scale synthesis.
